

Visualisierung von Graphalgorithmen

Implementierung

```
Flow maxFlow(Graph G) {  
    var f = new Flow(G);  
    while(f.hasResPath(s, t))  
        f.findResPath(s, t)  
          .augment();  
    return f;  
}
```

Visualisierung von Graphalgorithmen

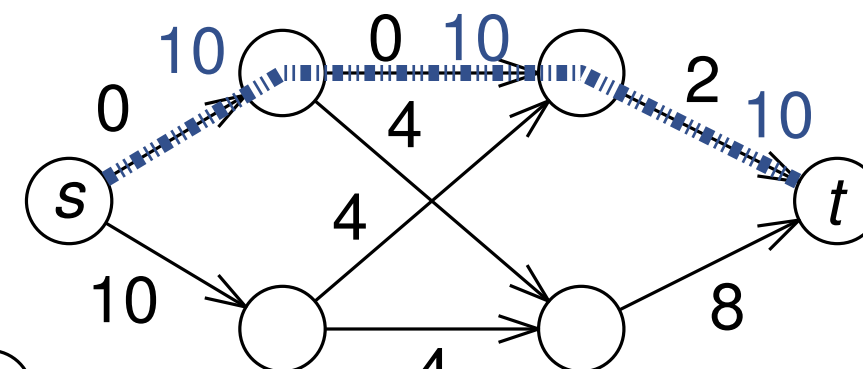

Implementierung

```

Flow maxFlow(Graph G) {
  var f = new Flow(G);
  while(f.hasResPath(s, t))
    f.findResPath(s, t)
      .augment();
  return f;
}
  
```

Visualisierung

Visualisierung von Graphalgorithmen

Implementierung

```

Flow maxFlow(Graph G) {
  var f = new Flow(G);
  while(f.hasResPath(s, t))
    f.findResPath(s, t)
      .augment();
  return f;
}
  
```

Visualisierung

Visualisierung von Graphalgorithmen

Implementierung

```
Flow maxFlow(Graph G) {
  var f = new Flow(G);
  while(f.hasRes)
    f.findResPath
      .augment();
  return f;
}
```

Aufgabenstellung

- Generisches Visualisierungsframework für Graphalgorithmen
- Algorithmen im Backend, interaktives Web-Frontend
- Tikz-Export für Animationen
- Java, moderne Websprache, React
